Used this to teach AP Calc BC Uses applications in science and engineering to demonstrate the concepts learned. The text has little biographies of people that did mathematical things strewn throughout and multiple worked examples. The book uses lots of computer-generated graphics and other things. I would say it is an excellent reference as well since it has tables of derivatives and integrals in the book along with answers to odd-numbered exercises. This particular text covers topics ranging from beginning limits to vector calculus. So it obviously builds on what was learned. Just in case you never had it, it also covers some Precalculus in the very beginning of the book. The text also contains little projects that people can do to demonstrate the ideas taught. I got this book for College so I can't remember the last time I cracked it open. In any case, I guess it is good that I didn't get rid of it. The only real problem is that the book seems to be a bit 'busy' if you will forgive the expression. With all of the little images and biographies and pictures it sometimes gets distracting. ...more Wonderful book. It explains the concepts quite well, and it gives proofs for most theorems and rules. My one problem with this book is that in the applications, it uses imperial units rather than metric. Muy buen libro para cálculo. Muchos ejemplos. Limits are definitely an allegory for other things. :) Fantastic Math It cost me \$90, I better like it. Designed for the three-semester course for math and science majors, the Larson/Hostetler/Edwards series continues its tradition of success by being the first to offer both an Early Transcendental version as well as a new Calculus with Precalculus text. This was also the first calculus text to use computer-generated graphics (Third Edition), to include exercises involving the use of computers and graphing calculators (Fourth Edition), to be available in an interactive CD-ROM format (Fifth Edition), and to be offered as a complete, online calculus course (Sixth Edition). Every edition of the book has made the mastery of traditional calculus skills a priority, while embracing the best features of new technology and, when appropriate, calculus reform ideas. Eduspace is Houghton Mifflin's online learning tool. Powered by Blackboard, Eduspace is a customizable, powerful and interactive platform that provides instructors with text-specific online courses and content. The Larson/Hostetler/Edwards Calculus course features even-numbered questions from the book and test bank content in question pools.
